

Chain Rule

We know, $\frac{d}{dx}(\sin x) = \cos x$, $\frac{d}{dx}(x^3) = 3x^2$

So can we say anything on $\frac{d}{dx}(\sin(x^3))$ at $x=a$?

Let's use the definition of derivative: $f(x) = \sin(x^3)$

$$\lim_{x \rightarrow a} \frac{f(x) - f(a)}{x - a} = \lim_{x \rightarrow a} \frac{\sin(x^3) - \sin(a^3)}{x - a}$$
$$= \lim_{x \rightarrow a} \left[\frac{\sin(x^3) - \sin(a^3)}{x^3 - a^3} \cdot \frac{x^3 - a^3}{x - a} \right]$$

$$= \lim_{x \rightarrow a} \frac{\sin(x^3) - \sin(a^3)}{x^3 - a^3}$$

$$\lim_{x \rightarrow a} \frac{x^3 - a^3}{x - a}$$

$$[x^3]' \text{ at } x=a$$
$$= 3a^2$$

Let, $u = x^3$
Then $x \rightarrow a \Rightarrow u \rightarrow a^3$

$$= \lim_{u \rightarrow a^3} \frac{\sin(u) - \sin(a^3)}{u - a^3}$$

$$[\sin u]'_{u=a^3}$$

$$= \cos u \Big|_{u=a^3}$$

$$= \cos(a^3)$$

$$\text{So, } \frac{d}{dx} [\sin(x^3)] \Big|_{x=a} = \cos(a^3) \cdot 3a^2$$

Note: If we write $g(x) = x^3$ & $h(x) = \sin x$

then $\sin(x^3) = \sin(g(x)) = h(g(x)) = \underbrace{(h \circ g)(x)}_{\text{composition}}$

Let $f(x)$, $g(x)$ be functions & let $h(x) = (f \circ g)(x)$
 $= f(g(x))$.

Then $h'(x) = \underbrace{f'(g(x))}_{\text{outside function}} \cdot \underbrace{g'(x)}_{\text{inside function}}$.

Alternatively, g is a function of x .

& f is a function of $g(x)$, say u .

$$\begin{aligned} \text{Then, } \frac{d}{dx}[h(x)] &= \frac{d}{dx}[f(u)] \\ &= \frac{d}{du}[f(u)] \cdot \frac{du}{dx} \\ &= f'(u) \cdot [u'] \\ &= f'(u) \cdot g'(x). \end{aligned}$$
